MASTER WEBSITE GENERATION PROMPT

DEADLOCK CARTEL — Premium Cinematic Web3 Brand & Digital Experience

You are an elite multidisciplinary digital product team consisting of:

- A world-class Creative Director
- A senior Art Director
- A luxury brand identity designer
- A senior editorial and graphic designer
- A principal UX/UI designer
- A senior interaction and motion designer
- A 3D web experience designer
- A senior frontend engineer
- A Web3 product architect
- A design systems engineer

Your task is to DESIGN AND BUILD a complete, production-quality website for DEADLOCK CARTEL.

This is not a generic NFT landing page.

It must feel like the official digital headquarters of a sophisticated, cinematic, private financial brotherhood: a powerful institution with its own identity, hierarchy, members, treasury, philosophy, and economic ecosystem.

The final result must demonstrate the quality of an internationally competitive digital design studio.

Do not produce a generic template.
Do not create a basic landing page with a dark background and gold buttons.
Do not prioritize visual effects over design quality, usability, or performance.

Every section, component, image, interaction, animation, spacing decision, typography choice, and responsive behavior must follow one coherent art direction.

---

01 — PROJECT IDENTITY AND SOURCE DATA

All information in this section is the authoritative project brief.

Use it as the primary source of truth.

Do not assume that you have access to previous conversations, external project documents, or additional context.

Official Brand Information

Brand name: DEADLOCK CARTEL

Official website: deadlockcartel.xyz

Social username: @DeadLockCartel

Token ticker: DLC

Blockchain network: Robinhood Chain

Total NFT supply: 3,333

Supply mechanism: Deflationary / permanent supply reduction through the 3-for-1 Ascension Burn mechanism.

Brand category:
An on-chain economic brotherhood combining digital collectibles, collective financial participation, community governance, a multi-tier membership system, and a shared tokenized-stock treasury.

Primary brand statement:

"WALL STREET HAD ITS CARTELS. NOW, THE EVERYDAY PEOPLE HAVE THEIRS."

Supporting brand description:

"An on-chain economic brotherhood of 3,333 Sworn Protectors on the Robinhood Chain. Built around a collective treasury, a four-tier hierarchy, community contribution, and a shared economic vision."

Brand Philosophy

For decades, major financial institutions, banks, and exclusive investment funds have maintained their own financial networks and alliances.

They have historically controlled access to opportunities, made decisions behind closed doors, and maintained advantages over independent market participants.

DeadLockCartel is presented as a response to this imbalance.

It is an alliance of independent individuals, creators, and traders who unite around shared interests, collective intelligence, community participation, and a common treasury.

The project describes its members as honorable protectors, independent builders, and traders.

It is not intended to represent a criminal organization.

The concept of "Cartel" is used in the project's own narrative to represent an alliance of independent forces protecting shared interests.

Brand Symbolism

The visual language of the characters is based on:

- Tailored suits
- Luxury coats
- Fur coats
- Jewelry
- Distinctive accessories
- Character-specific clothing
- Defensive symbolism

These elements represent dignity, discipline, mutual respect, financial independence, unity, and deterrence.

Weapons appearing in character artwork are symbolic representations of defensive power and protection, not aggression.

The central message:

"WE ARE HONORABLE AND PEACEFUL, BUT NEVER DEFENSELESS."

The visual identity must communicate this message without turning the website into a violent or stereotypical gangster aesthetic.

The Meaning of DeadLock

DeadLock represents an unbreakable defensive alliance in the project's fictional brand philosophy.

It symbolizes a united structure that resists external pressure and protects its members and shared interests.

Use this as a brand metaphor.

Do not present it as a formal technical definition of blockchain deadlocks.

---

02 — THE FOUR-TIER HIERARCHY

The entire project is organized around four membership classes.

These four classes must be visually distinct but belong to one unified artistic universe.

All numbers and voting weights below are fixed project data.

Tier 01 — THE KINGPINS

Quantity: 33 NFTs

Supply share: Approximately 0.99%

Voting power: 50x

Role:
The Apex Architects.

Description:
The strategic leaders, principal architects, and central pillars of the Cartel.

They represent the highest level of influence and strategic authority.

They are associated with the highest governance weight and the highest monthly treasury allocation eligibility, subject to branch activity and growth conditions.

Reveal reward:
Each of the 33 Kingpin NFTs is associated with a high-multiplier bounty, paid in ETH or tokenized stocks.

Exact bounty amounts and payment rules have not been provided.

Do not invent these values.

Art direction:

- Exceptional bespoke tailoring
- Distinguished luxury suits
- High-quality coats
- Rare jewelry
- Signature accessories
- Strong and controlled poses
- Visually authoritative presence
- Premium materials
- More elaborate character-specific details

The Kingpins must feel exceptional without relying exclusively on gold-colored clothing.

Tier 02 — THE GODMOTHERS

Quantity: 169 NFTs

Supply share: Approximately 5.07%

Voting power: 15x

Role:
The Matriarchs of the Stock Endowment and Community Welfare.

Description:
The strategic women of the Cartel.

They are described as the financial strategists, treasury managers, and key figures responsible for overseeing the tokenized-stock portfolio, resource distribution, and community welfare.

Their character design must have a dedicated feminine anatomical and costume design system.

Reveal reward:
Each of the 169 Godmother NFTs is associated with a 100% mint rebate according to the project brief.

The exact rebate calculation, payment mechanism, eligibility conditions, and settlement timing remain unspecified.

Do not invent these details.

Art direction:

- Distinct feminine character anatomy
- Bespoke tailored clothing
- Sophisticated luxury fashion
- Elegant jewelry
- Controlled and intelligent expressions
- Strong independent character presence
- Premium accessories
- Distinct silhouettes

Do not design them as simply female versions of Kingpins.

They must have their own visual identity.

Tier 03 — THE MEMBERS

Quantity: 469 NFTs

Supply share: Approximately 14.07%

Voting power: 5x

Role:
The Sworn Squad Captains.

Description:
Members are the operational commanders, experienced analysts, and execution layer of the Cartel.

Each Member supervises a squad of approximately 5–6 Rookies.

Their responsibilities include:

- Guiding their squad
- Reviewing community tasks
- Supporting Rookie development
- Encouraging participation
- Helping the squad progress

Captain's Cut:
When a Rookie in a Member's squad wins a challenge, ascends in rank, or receives a reward, the Member is described as receiving a 1% leadership commission.

The exact calculation base and payment implementation are unspecified.

Do not invent the financial formula.

Art direction:

- Tailored but more practical clothing
- Strong contemporary silhouettes
- Distinctive leadership accessories
- Sophisticated urban fashion
- Confident but approachable character presence
- More operational and versatile styling than Kingpins

Tier 04 — THE ROOKIES

Quantity: 2,662 NFTs

Supply share: Approximately 79.87%

Voting power: 1x

Role:
The Street Vanguard.

Description:
Rookies represent the energetic and developing foundation of the community.

They enter the Cartel to learn, contribute, participate in educational activities, benefit from community knowledge, and potentially ascend into higher ranks.

They are the largest group within the collection.

Art direction:

- Exclusive streetwear system
- Contemporary fashion
- Hoodies
- Jackets
- Layered clothing
- Distinctive urban accessories
- Diverse character personalities
- Youthful energy
- Strong silhouette variety

IMPORTANT:

Although Rookies represent approximately 80% of the collection, their artistic quality must not be lower than other tiers.

All four tiers must share the same rendering quality, material quality, character-design standards, and overall art direction.

Their differences must be communicated through design language, clothing, accessories, silhouettes, expressions, and visual identity — not simply color changes.

---

03 — THE SIX UTILITY PILLARS

These six pillars are the foundation of the website's informational architecture.

They must be presented as a coherent ecosystem rather than six generic feature cards.

PILLAR 01 — THE DEADLOCK STOCK ENDOWMENT

Concept:
A permanent shared treasury based on tokenized stocks and digital assets.

Funding sources:

- A portion of initial mint proceeds
- 50% of secondary-market royalties

Treasury structure:

The project describes a transparent multisignature Safe wallet.

Intended assets:

- NVDA tokenized stock
- TSLA tokenized stock
- AAPL tokenized stock
- HOOD tokenized stock
- SPY tokenized exposure
- ETH

The stated model is to preserve the underlying treasury portfolio while using returns, portfolio growth, and royalty income to support holder rewards and community initiatives.

IMPORTANT DATA LIMITATIONS:

The exact percentage of mint proceeds allocated to the treasury is not specified.

The exact treasury allocation model, operational costs, distribution formula, asset custody structure, and investment execution mechanism are not specified.

Do not create fictional portfolio values, balances, performance figures, transaction histories, or financial returns.

Website presentation:
Create a premium financial treasury experience with clearly separated data modules:

- Total Treasury Value
- Asset Allocation
- Portfolio Performance
- Treasury Transactions
- Funding Sources
- Multisig Wallet
- Historical Performance

When real data is unavailable, display an honest empty state or a clearly labeled "Awaiting On-Chain Data" state.

Do not display fabricated financial charts.

PILLAR 02 — INSTANT REVEAL BOUNTIES

Total special reward NFTs: 202

Composition:

- 33 Kingpins
- 169 Godmothers

Kingpin reward:
A high-multiplier bounty paid in ETH or tokenized stocks.

Godmother reward:
A 100% mint rebate according to the project brief.

The rewards are associated with the delayed reveal event.

Website presentation:

- A premium reveal vault
- Sealed reward visual language
- Individual reward categories
- Reveal status
- Reward eligibility
- Reward history, when real data exists
- On-chain transaction references, when available

Do not invent reward amounts.

Do not claim that a reward has been paid unless a verified transaction or project data confirms it.

PILLAR 03 — THE 4-TIER PATRONAGE PROTOCOL

The project connects all four membership tiers through a patronage and mentorship system.

Leadership layer:
33 Kingpins and 169 Godmothers, totaling 202 senior leaders.

Operational layer:
469 Members acting as Squad Captains.

Community layer:
2,662 Rookies.

Each Member supervises a group of approximately 5–6 Rookies.

The distribution can mathematically be represented as:

- 152 Members supervising 5 Rookies
- 317 Members supervising 6 Rookies

Total: 2,662 Rookies.

Member commission:
A 1% Captain's Cut is described for certain Rookie rewards, challenges, and ascensions.

Senior leader allocation:
Kingpins and Godmothers are described as receiving monthly treasury allocation eligibility based on the activity and growth of their supported branches.

The exact allocation formula, squad assignment mechanism, reassignment rules, and commission calculation are not specified.

Website presentation:
Create a visual hierarchy diagram and a dedicated squad management experience.

Potential interface modules:

- My Squad
- Squad Members
- Active Members
- Squad Performance
- Contribution History
- Rewards Earned
- Captain's Cut

Never fabricate user assignments or reward values.

PILLAR 04 — PROOF-OF-MERIT & CARTEL GRANTS

Proof-of-Merit:
Weekly fractional tokenized-stock rewards are intended for members who create measurable value for the community.

Qualifying activities described in the brief include:

- Educating new members
- Producing market analysis
- Creating useful research
- Producing artistic content
- Creating community content
- Managing squads
- Contributing to community development

Cartel Grants:
A portion of treasury profits is intended to support promising member ideas, tools, creative projects, and community initiatives.

The exact weekly reward budget, review process, evaluation criteria, and grant percentage are not specified.

Website presentation:
Create a section called:

"THE MERIT EXCHANGE"

Include:

- Contribution categories
- Merit submission interface concept
- Evaluation status
- Grant application interface concept
- Reward history
- Approved projects

Clearly distinguish conceptual UI from operational features.

PILLAR 05 — ON-SITE TRADING DESK

Concept:
A trading and governance interface integrated into the website.

Core features described:

- Market charts
- Treasury value
- Asset list
- Weekly stock purchase proposals
- Voting
- Voting weight based on NFT tier
- Voting history
- Market prediction competitions
- On-site market information

Voting weights:

- Kingpin: 50x
- Godmother: 15x
- Member: 5x
- Rookie: 1x

Governance integration:
The project describes Snapshot API integration for gasless voting.

Important technical distinction:
Snapshot-style voting is generally off-chain governance voting, even though it may use on-chain ownership data or verification strategies.

Do not label voting as an executed on-chain transaction unless the actual implementation supports that claim.

Website presentation:

- Voting dashboard
- Active proposals
- Proposal details
- Voting power display
- Vote options
- Proposal history
- Treasury asset overview
- Market chart area
- Prediction competition area

The interface must distinguish:

1. Proposal creation
2. Voting
3. Vote results
4. Treasury execution

Do not imply that a successful vote automatically purchases an asset unless an actual execution mechanism exists.

PILLAR 06 — THE 3-FOR-1 ASCENSION BURN

Concept:
Three Rookie NFTs can be burned to ascend to Member status.

Mechanism:

- User holds 3 Rookie NFTs.
- User initiates the Ascension process.
- The three Rookie NFTs are burned.
- A Member-level NFT is issued, subject to the actual contract implementation.

Supply impact:
Three NFTs are removed and one new NFT is issued.

Net supply reduction: 2 NFTs per completed ascension.

Website presentation:

- A visually distinctive Ascension experience
- Three Rookie character slots
- One Member destination slot
- Clear burn confirmation
- Transaction confirmation
- Final status
- Updated NFT ownership

Do not create a fake burn transaction.

Do not claim that an ascension has completed without verified contract execution.

---

04 — BRAND POSITIONING AND ART DIRECTION

The visual identity must be built around this positioning:

"CINEMATIC PRIVATE FINANCIAL BROTHERHOOD"

The design must combine five visual disciplines:

1. Luxury private banking
2. Cinematic editorial photography
3. Contemporary character design
4. Premium fashion art direction
5. Modern financial technology

The result should feel like a private financial institution with a cinematic fictional universe.

It must not resemble:

- A generic crypto dashboard
- A stereotypical mafia website
- A gaming casino
- A cyberpunk interface
- A low-quality NFT mint template
- A generic SaaS landing page

Visual Personality

Primary attributes:

- Authoritative
- Sophisticated
- Cinematic
- Restrained
- Exclusive
- Confident
- Disciplined
- Contemporary
- Trustworthy

Avoid:

- Excessive neon
- Excessive glow
- Excessive gradients
- Random decorative particles
- Overused glassmorphism
- Excessive rounded cards
- Cartoon gangster clichés
- Excessive weapon imagery
- Unnecessary animated backgrounds

Color System

Use this proposed brand palette:

Primary Obsidian:
#171717

Deep Charcoal:
#202020

Secondary Charcoal:
#292929

Antique Gold:
#B69A67

Muted Gold:
#8D7954

Ivory:
#E6DFD1

Warm White:
#F4F0E8

Muted Stone:
#77736B

Oxblood:
#562C32

Forest:
#34423A

Color usage:

- Approximately 65% dark neutral surfaces
- Approximately 20% light neutral surfaces and text

- Approximately 10% antique gold accents
- Approximately 5% contextual accent colors

These percentages are starting guidelines, not rigid rules.

Gold must be used selectively.

Do not make every border, icon, title, and button gold.

Use ivory for high-contrast editorial typography.

Use muted stone for secondary information.

Use oxblood and forest only where they have meaningful contextual roles.

Typography System

Use a sophisticated typographic pairing.

Display typography:
A premium editorial serif or distinctive display face.

Body typography:
A highly readable contemporary sans-serif.

Financial data:
A tabular or monospaced numeric typeface.

Navigation:
A clean modern sans-serif with controlled letter spacing.

Typography rules:

- Strong typographic hierarchy.
- Large editorial headlines.
- Controlled uppercase usage.
- Consistent line-height.
- Generous whitespace.
- No decorative font overuse.
- Numeric alignment for financial information.

Recommended typographic scale for desktop:

Display XL: 88–112px

Display L: 64–80px

H1: 56–64px

H2: 40–48px

H3: 28–32px

H4: 20–24px

Body Large: 18px

Body: 16px

Body Small: 14px

Caption: 12px

Use responsive scaling on smaller screens.

Do not use all font sizes indiscriminately.

Layout and Composition

Use a 12-column editorial grid on desktop.

Recommended desktop container:
Maximum width: 1440px.

Standard content width:
Approximately 1200–1280px.

Desktop side margins:
Approximately 64–96px depending on viewport width.

Tablet side margins:
32–40px.

Mobile side margins:
20–24px.

Spacing system:
Use an 8px base spacing system.

Standard spacing values:
4, 8, 12, 16, 24, 32, 40, 48, 64, 80, 96, 120, 160px.

Section spacing:
Desktop: 112–160px vertical spacing depending on content density.

Tablet: 80–112px.

Mobile: 64–88px.

Do not use arbitrary spacing values without a design reason.

Use asymmetrical layouts, large image fields, editorial typography, and intentional negative space.

Avoid placing every element inside a rounded card.

---

05 — IMAGE AND PHOTOGRAPHY ART DIRECTION

All imagery must follow one consistent visual language.

Photography style:

- Cinematic low-key lighting
- Chiaroscuro
- Controlled highlights
- Warm metallic reflections
- Deep shadows
- Premium material detail
- Tailored fashion photography
- Architectural photography
- Editorial portraiture

Visual references:

- Luxury fashion campaigns
- Premium private banking environments
- Cinematic family portraits
- Dark architectural photography
- Editorial magazine layouts
- High-end luxury interiors

Image characteristics:

- Natural skin texture
- Realistic fabric detail
- Physically plausible lighting
- Carefully controlled depth of field
- High-quality composition
- Realistic materials
- No excessive AI artifacts
- No generic stock photography appearance

The website should use a mixture of:

- Large cinematic hero imagery
- Character portraits
- Architectural imagery
- Detail shots
- Graphic illustrations
- Custom icons
- Data visualizations

IMPORTANT:

Do not invent or pretend that generated placeholder characters are actual official NFT collection items.

Use visual placeholders only where actual collection artwork is unavailable.

Label unavailable collection assets appropriately in the design system.

Never create fake team portraits or claim generated people are official project members.

---

06 — COMPLETE WEBSITE INFORMATION ARCHITECTURE

Build two connected experiences:

A. PUBLIC WEBSITE

B. PRIVATE MEMBER PORTAL

They must share the same design system but have different visual and functional priorities.

PUBLIC WEBSITE NAVIGATION

Desktop navigation:

Left:
DEADLOCK CARTEL logo.

Center:

- THE LORE
- HIERARCHY
- COLLECTION
- THE VAULT
- UTILITIES

Right:

- COMMUNITY
- CONNECT WALLET / MEMBER ACCESS

Navigation behavior:

- Fixed or sticky navigation.
- Transparent over the initial hero.
- Changes to a solid dark background after scrolling.
- Subtle transition.
- Clear active state.
- Functional dropdowns only when needed.
- Responsive mobile menu.

The logo must return to the homepage.

Do not create nonfunctional navigation links.

PAGE 01 — HOMEPAGE

This page is the primary brand experience.

Its purpose is to communicate:

- Brand identity
- Project philosophy
- Total supply
- Four-tier hierarchy
- Shared treasury concept
- Utility ecosystem
- Entry points into the project

SECTION 01 — HERO

Height:
Approximately 90–100svh on desktop.

Minimum height:
680px.

Background:
Cinematic architectural photography or a custom 3D environment.

Preferred visual:
A luxurious private headquarters, dark architectural interior, long conference table, black marble, warm metallic details, dramatic but restrained lighting.

Composition:

- Main visual centered or slightly offset.
- Headline positioned in a clean text region.
- Large negative space.
- Strong foreground/background separation.
- No visual clutter.

Content:

Eyebrow:
"AN ON-CHAIN ECONOMIC BROTHERHOOD"

Main headline:
"DEADLOCK CARTEL"

Supporting headline:
"WALL STREET HAD ITS CARTELS. NOW, THE EVERYDAY PEOPLE HAVE THEIRS."

Description:
"An on-chain economic brotherhood of 3,333 Sworn Protectors on the Robinhood Chain. Built around a collective treasury, a four-tier hierarchy, and a shared economic vision."

Primary CTA:
"EXPLORE THE CARTEL"

Secondary CTA:
"EXPLORE THE VAULT"

Include a subtle downward scroll indicator.

Optional data strip:
3,333 TOTAL SUPPLY
4 DISTINCT RANKS
6 UTILITY PILLARS

The Hero must not be crowded.

SECTION 02 — BRAND MANIFESTO

Section identifier:
01 / THE MANIFESTO

Title:
"HONOR ARMED WITH LEVERAGE."

Main copy:

"For too long, traditional markets have operated behind closed doors.

DeadLockCartel represents an alliance of independent individuals who unite around shared value, collective intelligence, and a common economic vision.

We wear bespoke suits for dignity. We stand together for opportunity. Our strength is not aggression, but unity, discipline, and deterrence.

When external pressure threatens the family, we stand as one.

We are not here to imitate the old system.

We are here to build a new alliance."

Visual direction:

- Large editorial typography.
- One cinematic image.
- Asymmetrical layout.
- Carefully controlled text width.
- Generous whitespace.
- No conventional three-column feature cards.

SECTION 03 — THE FOUR-TIER HIERARCHY

Section identifier:
02 / THE CHAIN OF COMMAND

Headline:
"3,333 PROTECTORS. FOUR LEVELS. ONE ALLIANCE."

Description:
"Every member has a place, a role, and a path within the Cartel."

Display four major tier panels.

Each panel must include:

- Tier name
- Character artwork
- Quantity
- Supply percentage
- Voting weight
- Role description
- Distinct visual treatment
- Link to detailed tier information

Display exact values:

KINGPINS
33 UNITS
0.99%
50x VOTING POWER

GODMOTHERS
169 UNITS
5.07%
15x VOTING POWER

MEMBERS
469 UNITS
14.07%
5x VOTING POWER

ROOKIES
2,662 UNITS
79.87%
1x VOTING POWER

Use high-quality character portraits.

Desktop:
Use a strong four-panel composition or a large editorial layout with distinct image proportions.

Mobile:
Use a readable stacked or horizontally navigable layout.

Do not reduce character artwork to tiny thumbnails.

Interaction:

- Subtle image scale on hover.
- Controlled overlay reveal.
- Clear text contrast.
- Keyboard-accessible navigation.
- No excessive motion.

SECTION 04 — THE COLLECTION

Section identifier:
03 / THE COLLECTION

Headline:
"THE FACES OF THE CARTEL."

Description:
"3,333 unique digital identities. Four ranks. One visual universe."

Include:

- Featured character artwork
- Tier filtering
- NFT ID search
- Trait filtering when actual metadata is available
- Rarity information only when verified
- Individual NFT detail pages when supported

Do not fabricate NFT artwork or metadata.

If actual NFT data is unavailable, build the full interface with clearly labeled sample placeholders and an empty-state system.

SECTION 05 — THE VAULT

Section identifier:
04 / THE STOCK ENDOWMENT

Headline:
"WEALTH BUILT TOGETHER."

Description:
"A shared treasury designed around tokenized-stock exposure, digital assets, and community participation."

Show a visually premium financial dashboard preview.

Include modules:

- Total Treasury Value
- Asset Allocation
- Treasury Performance
- Funding Sources
- Treasury Wallet
- Transaction History

Asset labels:
NVDA
TSLA
AAPL
HOOD
SPY
ETH

Show the 50% secondary royalty contribution as project policy.

Do not invent the percentage of initial mint proceeds allocated to the treasury.

Do not display fake balances or returns.

When data is unavailable, show:
"AWAITING VERIFIED TREASURY DATA"

CTA:
"ENTER THE VAULT"

SECTION 06 — THE SIX PILLARS

Section identifier:
05 / THE UTILITY ENGINE

Headline:
"MORE THAN OWNERSHIP. A CONNECTED ECONOMIC SYSTEM."

Description:
"Six interconnected mechanisms designed to connect membership, participation, treasury activity, and community growth."

Create six visually distinct utility modules:

01 — THE DEADLOCK STOCK ENDOWMENT

02 — INSTANT REVEAL BOUNTIES

03 — THE 4-TIER PATRONAGE PROTOCOL

04 — PROOF-OF-MERIT & CARTEL GRANTS

05 — THE ON-SITE TRADING DESK

06 — THE 3-FOR-1 ASCENSION BURN

Each module must have:

- Unique graphic motif
- Number
- Title
- Short description
- Relevant visual
- Learn more link
- Implementation status

Use different compositions rather than identical cards.

SECTION 07 — ASCENSION

Section identifier:
06 / THE ASCENSION PROTOCOL

Headline:
"THREE ROOKIES. ONE ASCENDED MEMBER."

Description:
"Three Rookie NFTs can be burned to ascend into the Member rank, reducing the total collection supply by two NFTs per completed ascension."

Visual:
Three distinct Rookie identity slots converging into one Member identity.

Include:

- 3 Rookie positions
- 1 Member destination
- A clear transformation sequence
- A concise explanation of the mechanism

CTA:
"DISCOVER ASCENSION"

Do not simulate an actual transaction on the public website.

SECTION 08 — COMMUNITY

Headline:
"THE CARTEL TAKES CARE OF ITS OWN."

Description:
"An alliance grows stronger when its members contribute, build, learn, and move forward together."

Include:

- X / Twitter link
- Discord link only if an official URL is provided
- Community participation
- GTD application entry point

Primary CTA:
"APPLY FOR GTD CLEARANCE"

The GTD application destination must be configurable.

Do not invent a form backend or claim that applications are being processed if no backend exists.

SECTION 09 — FOOTER

Include:

- DEADLOCK CARTEL logo
- Short brand statement
- Main navigation
- Collection link
- Vault link
- Utilities link
- Community links
- Documentation links, if available
- Official website
- Token ticker DLC
- Network: Robinhood Chain

Use a sophisticated, restrained footer.

No unnecessary visual clutter.

---

07 — DEDICATED PUBLIC PAGES

Create these dedicated routes:

/
Homepage.

/lore
Full brand philosophy and manifesto.

/hierarchy
Detailed explanation of the four membership tiers.

/collection
NFT gallery and filtering.

/collection/[id]
Individual NFT detail template.

/vault
Treasury overview.

/utilities
Overview of the six utility pillars.

/utilities/stock-endowment
Stock Endowment.

/utilities/bounties
Instant Reveal Bounties.

/utilities/patronage
Patronage Protocol.

/utilities/merit
Proof-of-Merit and Grants.

/utilities/trading-desk
Trading Desk.

/utilities/ascension
Ascension Burn.

/community
Community and GTD information.

/member
Member access entry point.

All routes must have coherent navigation and consistent visual identity.

Do not create broken or empty routes.

If an individual route is not yet fully connected to live data, provide a complete, honest informational state rather than a fake functional feature.

---

08 — PRIVATE MEMBER PORTAL

The Member Portal is a separate application experience.

It must retain the brand's visual identity but prioritize clarity, usability, and information density.

Use a darker, restrained financial interface.

Do not make it look like a generic banking SaaS template.

MEMBER PORTAL NAVIGATION

Desktop:
Persistent vertical sidebar.

Mobile:
Responsive navigation drawer or bottom navigation where appropriate.

Sidebar modules:

01 — OVERVIEW

02 — MY COLLECTION

03 — TRADING DESK

04 — MY SQUAD

05 — MERIT EXCHANGE

06 — VAULT & REWARDS

Top bar:

- Connected wallet
- Network status
- Member identity
- Notification entry
- Profile menu

MEMBER PAGE 01 — OVERVIEW

Display:

- Connected wallet
- Owned NFT count
- Member rank
- Voting power
- Available actions
- Recent activity
- Rewards overview
- Treasury snapshot

All information must be based on verified connected data.

MEMBER PAGE 02 — MY COLLECTION

Display:

- Owned NFTs
- Rank
- NFT ID
- Traits
- Metadata
- Ownership status
- Relevant available actions

Do not display fake ownership data.

MEMBER PAGE 03 — TRADING DESK

Display:

- Active proposals
- Proposal description
- Voting options
- Voting deadline
- User voting power
- Voting status
- Previous proposals
- Voting results
- Treasury context

Voting weights:

Kingpin: 50x

Godmother: 15x

Member: 5x

Rookie: 1x

Clearly distinguish voting from treasury execution.

Use Snapshot integration only if configured with valid proposal and voting data.

MEMBER PAGE 04 — MY SQUAD

Display:

- Squad Captain
- Squad members
- Squad size
- Member activity
- Contribution records
- Squad performance

- Reward history
- Captain's Cut information

Do not invent squad assignments.

MEMBER PAGE 05 — MERIT EXCHANGE

Display:

- Contribution categories
- Submission status
- Evaluation status
- Merit history
- Available grants
- Grant application status

Clearly distinguish submitted, pending, approved, and rejected states.

MEMBER PAGE 06 — VAULT & REWARDS

Display:

- Treasury information
- Reward eligibility
- Reward history
- Bounty status
- Transaction references
- Claimable rewards when verified

Never show a reward as claimable unless the underlying system confirms eligibility.

---

09 — DESIGN SYSTEM AND COMPONENT LIBRARY

Create a reusable design system before building all pages.

Required foundations:

1. Color tokens
2. Typography tokens
3. Spacing tokens
4. Grid and layout rules
5. Border and radius rules
6. Shadows and lighting rules
7. Button system
8. Form system
9. Navigation system

10. Card and panel system
11. Data visualization system
12. Modal system
13. Loading states
14. Empty states
15. Error states
16. Notification system
17. Responsive behavior
18. Accessibility rules

BUTTON SYSTEM

Primary:
Antique gold background, dark text, controlled hover.

Secondary:
Transparent background, thin muted border, ivory text.

Tertiary:
Text-based action with subtle hover transition.

Buttons must have:

- Default
- Hover
- Focus
- Active
- Disabled
- Loading states

Avoid oversized rounded pill buttons.

Use square or subtly rounded geometry.

BORDER SYSTEM

Use restrained borders.

Prefer:

- Thin 1px borders
- Low-contrast charcoal dividers
- Muted gold only for meaningful emphasis

Do not outline every container in gold.

CARD SYSTEM

Use cards only where information grouping is useful.

Mix:

- Open editorial layouts
- Image-led panels
- Borderless content areas
- Financial data panels
- Structured interface modules

Avoid repetitive card grids.

---

10 — MOTION DESIGN SYSTEM

Motion must support the brand narrative.

Create four levels of motion:

LEVEL 01 — MICRO INTERACTIONS

- Button hover
- Link hover
- Navigation state
- Cursor feedback
- Small image scale
- Focus transitions

LEVEL 02 — UI MOTION

- Accordion expansion
- Tab transitions
- Content reveal
- Modal entrance
- Data state changes
- Filter transitions

LEVEL 03 — CINEMATIC MOTION

- Slow architectural parallax
- Controlled image movement
- Headline reveal
- Lighting transitions
- Editorial section entrances

LEVEL 04 — SYSTEM MOTION

- NFT Reveal
- Vault access
- Ascension
- Voting status
- Reward status

Create three signature animations:

THE LOCK:
A controlled mechanical locking or unlocking animation representing access to the Vault.

THE REVEAL:
A premium sealed-object opening experience representing NFT reveal and bounty discovery.

THE ASCENSION:
Three Rookie identities transforming into one Member identity.

Motion rules:

- Use controlled durations.
- Prefer smooth easing.
- Avoid excessive bounce.
- Avoid unnecessary looping.
- Respect reduced-motion preferences.
- Never block access to information behind long animations.
- Do not use scroll-jacking.

Suggested timing:
Micro interaction: 150–250ms.

Standard UI transition: 250–450ms.

Editorial reveal: 500–900ms.

Cinematic sequences: only when genuinely necessary.

Use GSAP or an equivalent animation system when appropriate.

---

11 — RESPONSIVE DESIGN

The website must be designed for:

- Large desktop: 1440px and above
- Standard desktop: 1280px
- Laptop: 1024px

- Tablet: 768px
- Mobile: 390px
- Small mobile: 360px

Do not simply shrink the desktop design.

Mobile must have its own composition.

Mobile rules:

- Simplified navigation
- Readable typography
- Reduced cinematic image complexity
- No horizontal overflow
- Touch-friendly controls
- Stacked content hierarchy
- Appropriate image cropping
- Clear CTAs
- Reduced motion where necessary
- Accessible forms
- Financial data must remain readable

Do not hide important content on mobile.

Do not make critical interactions hover-dependent.

---

12 — TECHNICAL IMPLEMENTATION

Use the platform's strongest supported stack.

Preferred architecture if supported:

Frontend:
Next.js / React.

Styling:
Tailwind CSS or a well-structured CSS architecture.

Animation:
GSAP and/or Framer Motion.

3D:
Three.js / React Three Fiber only when justified.

Web3:
Wagmi and Viem or equivalent EVM-compatible libraries.

Wallet:
Compatible EVM wallet connection system.

Governance:
Snapshot integration when configured.

Architecture must be modular.

Separate:

- Design components
- Page components
- Data layer
- Wallet layer
- Blockchain integrations
- Animation modules
- Content configuration
- Shared utilities

Do not put all website functionality in one oversized component.

Create reusable components.

Use clean naming conventions.

Keep content and data configurable.

Use semantic HTML.

Ensure keyboard accessibility.

Optimize image formats and loading.

Implement SEO metadata.

Implement appropriate loading, error, and empty states.

Do not expose private keys, API secrets, or sensitive credentials in client-side code.

---

13 — BLOCKCHAIN AND DATA RULES

The project uses Robinhood Chain.

The website must be prepared for EVM-compatible integration.

However, the following implementation details have not been supplied:

- NFT contract address
- Treasury Safe address
- Stock token contract addresses
- Ascension/Burn contract address
- Reward distribution contract
- Reveal metadata specification
- Official token contract address
- Snapshot space identifier
- Wallet authentication configuration
- Official asset data API

Do not invent these values.

Create a clearly documented configuration layer for future integration.

If the data is unavailable:

- Display an honest unavailable state.
- Do not fabricate blockchain data.
- Do not generate fake transactions.
- Do not simulate successful wallet operations.
- Do not claim a contract is deployed.
- Do not claim an asset is held by the treasury.
- Do not claim a vote has been executed.

Use clear labels:
"AWAITING CONTRACT CONFIGURATION"
"AWAITING VERIFIED DATA"
"NOT YET CONNECTED"
"COMING SOON"

Use these only where appropriate.

The website must never misrepresent a planned feature as a live feature.

---

14 — CONTENT AND TRUST REQUIREMENTS

The public website must clearly communicate the project's identity and mechanics.

But all financial statements must be handled responsibly.

Never invent:

- Treasury balance

- Portfolio returns
- NFT floor price
- Trading volume
- Mint price
- Secondary sales
- Reward amounts
- Investment performance
- Guaranteed financial returns
- User counts
- Partnership announcements
- Team credentials
- Audit status

Do not create fake testimonials.

Do not invent official partnerships.

Do not claim that stock token ownership equals direct legal ownership of the underlying shares.

Where tokenized-stock exposure is discussed, use accurate wording and leave jurisdiction-specific eligibility and legal explanations configurable.

The website should have a documentation/legal information area for:

- Risk disclosure
- Tokenized asset information
- Geographic restrictions
- Terms of use
- Privacy policy
- Governance rules
- Reward conditions

Do not fabricate legal documents.

Use clearly labeled placeholders until official content is provided.

---

15 — PERFORMANCE AND QUALITY REQUIREMENTS

The final site must be visually impressive without becoming technically heavy.

Priorities:

1. Fast initial rendering
2. Optimized imagery
3. Responsive layout

4. Smooth interaction
5. Stable animation
6. Accessibility
7. SEO
8. Maintainable code

Performance rules:

- Lazy-load below-the-fold imagery.
- Use modern image formats.
- Avoid unnecessarily large video files.
- Avoid loading 3D scenes before they are needed.
- Provide static fallbacks for heavy visuals.
- Avoid excessive JavaScript dependencies.
- Prevent layout shifts.
- Keep navigation responsive.
- Test on mobile devices.

Target strong Core Web Vitals.

Do not sacrifice performance for unnecessary 3D effects.

---

16 — REQUIRED DELIVERABLES

Build the complete website, not just a visual concept.

The final deliverable must include:

1. Fully designed homepage
2. Public website routes
3. Dedicated utility pages
4. Collection gallery
5. NFT detail page template
6. Vault interface
7. Member portal interface
8. Responsive mobile layouts
9. Complete design system
10. Reusable component library
11. Motion system
12. Navigation and routing
13. Functional interface interactions
14. Data configuration layer
15. Empty and error states
16. SEO structure
17. Technical implementation notes

All pages must use the same design system.

The public experience and member portal must feel like two environments belonging to the same institution.

---

17 — STRICT EXECUTION WORKFLOW

Do not immediately generate every section without establishing a design direction.

Follow this workflow:

PHASE 1:
Analyze the entire brief and create a structured content map.

PHASE 2:
Establish the art direction, color system, typography, grid, image style, and design principles.

PHASE 3:
Design the homepage at high fidelity.

PHASE 4:
Establish the reusable component and design system.

PHASE 5:
Build all public pages.

PHASE 6:
Build the Member Portal.

PHASE 7:
Implement responsive layouts and interactions.

PHASE 8:
Implement motion and animation.

PHASE 9:
Integrate available data and prepare the missing integrations.

PHASE 10:
Perform visual, functional, responsive, and performance quality assurance.

Do not skip phases.

Do not replace detailed design with generic templates.

Do not simplify complex content into generic marketing cards.

Do not remove important information to make the page look cleaner.

Instead, organize information through hierarchy, progressive disclosure, and appropriate page structure.

---

18 — FINAL CREATIVE DIRECTION

The finished website should feel like:

- The digital headquarters of a powerful private financial alliance.
- A premium luxury brand with cinematic storytelling.
- A sophisticated editorial publication.
- A modern financial product.
- A character-driven digital universe.
- A coherent Web3 ecosystem.

The website must be distinctive enough to be recognizable without its logo.

The design must demonstrate:

- Exceptional typography
- Sophisticated composition
- Intentional negative space
- Strong visual hierarchy
- High-quality imagery
- Consistent art direction
- Meaningful motion
- Precise spacing
- Excellent responsive behavior
- Clear user journeys
- Trustworthy data presentation

The objective is not to make the website look expensive through gold colors and dramatic imagery.

The objective is to make it feel expensive through restraint, precision, consistency, composition, detail, and execution.

FINAL QUALITY STANDARD:

Every section must look intentionally art-directed.

Every component must have a reason to exist.

Every animation must serve a purpose.

Every data point must be truthful.

Every interaction must work or be clearly marked as unavailable.

Every page must feel like part of the same world.

Build DEADLOCK CARTEL as a complete, premium, production-oriented digital experience.
